ABOUT ME

Junior DevOps Engineer with 1 year of experience in Linux, AWS, Docker, and CI/CD pipelines. Experienced in automating deployments, managing cloud infrastructure, and supporting containerized applications. Focused on delivering reliable, scalable, and efficient solutions through DevOps best practices.

EDUCATION

University Of South Asia Lahore

CGPA : 3.66

BS Computer Science (BSCS)

PROJECTS

Project 1 :Linux Server Monitoring System

Technologies: Linux, Bash Shell Scripting

Description:

Developed a Linux server monitoring solution using Shell Scripts to monitor CPU, RAM, Disk Usage, and Server Uptime.

Responsibilities:

- Created automated monitoring scripts.
- Generated system health reports.
- Configured scheduled execution using Cron Jobs.
- Implemented log generation for troubleshooting.

Outcome:

- Reduced manual server health checks.
- Improved system monitoring efficiency.

Project 2: Dockerized Nginx Web Application

Technologies: Docker, Docker Compose, Linux

Description:

Containerized a static web application using Docker and managed deployment using Docker Compose.

Responsibilities:

- Created Docker File for application deployment.
- Configured Docker Compose services.
- Implemented Docker Networking.
- Managed persistent data using Docker Volumes.

Outcome:

- Simplified application deployment.
- Ensured environment consistency across servers.

Project 3: AWS EC2 Web Server Deployment

Technologies: AWS EC2, IAM, Linux

Description:

Deployed and managed a web application on AWS EC2.

Responsibilities:

- Created and configured EC2 instances.
- Managed SSH access and security groups.
- Configured IAM users and permissions.
- Installed and managed Nginx web server.

Outcome:

- Successfully hosted application on AWS Cloud.
- Improved understanding of cloud infrastructure management.

Project 4: CI/CD Pipeline Using GitHub Actions

Technologies: GitHub Actions, Docker, AWS ECR

Description:

Implemented a CI/CD pipeline to automate Docker image build and deployment processes.

Responsibilities:

- Configured GitHub Actions workflows.
- Automated Docker image creation.
- Pushed images to AWS ECR.
- Performed automated deployment steps.

Outcome:

- Reduced deployment time significantly.
- Eliminated manual build processes.

Project 5: Docker Swarm Cluster Setup

Technologies: Docker Swarm, Linux, Docker Networking

Description:

Built a Docker Swarm cluster for deploying containerized applications.

Responsibilities:

- Configured Manager and Worker Nodes.
- Deployed services in Swarm mode.
- Managed service scaling.
- Implemented overlay networking.

Outcome:

- Improved application availability.
- Learned container orchestration fundamentals.

TECHNICAL SKILLS

Operating Systems Linux administrator (Ubuntu, CentOS, Amazon Linux) Python
AWS EC2 AWS ECS AWS ECR AWS IAM AWS S3 Containerization Docker
Docker Compose Docker Networking Docker Volumes Docker Swarm CI/CD Tools
GitHub Actions GitLab CI/CD Git GitHub GitLab Shell Scripting (Bash)
Artificial Intelligence Agentic Ai (n8n) Linux System Monitoring Log Analysis
Resource Utilization Monitoring Server Performance Optimization **Networking:** TCP/IP, DNS, DHCP, SSH , telnet , netstat , ping **Web Servers:** Apache, Nginx , Ftpd , Httpd , Nfs , Samba
Scripting: Bash (basic) **Version Control:** Git **Virtualization:** VirtualBox / VMware / EC2
Monitoring Tools: Basic system monitoring & logs **Other Skills:** Troubleshooting, System Security, Backup Management , LVM

LANGUAGES

- English
- Urdu

CAREER OBJECTIVE

Seeking a DevOps Engineer position where I can utilize my Linux, AWS, Docker, and CI/CD expertise to build reliable, scalable, and automated infrastructure while continuously enhancing my cloud and automation skills.

CERTIFICATION AND TRAINING

Red Hat Certified Ssystems Administrator (RHCSA)

AWS Associate Solution Architect By Udemy

Docker Certified Associate
